

ASSIGNMENT NO: 1

Sakshi Santosh Gangurde

Roll no: 33229

1)ls

Ls is a Linux shell command that lists directory contents of files and directories. It provides valuable information about files, directories, and their attributes

Syntax: *ls [option] [file/directory]*

```
sakshi711@sakshi711:~/23231$ ls -a
.          bfill.cpp          circle      dda.cpp      linffill.cpp      test
..         bre_mouse       circle.cpp  dda_mouse    Polygon_filling   test.cpp
bangle     bre_mouse.cpp          clip        dda_mouse.cpp  Polygon_filling.cpp
bchess     'CGL-PR Statements For Reference.pdf' clip.cpp    fill.cpp       'SE_IT_CGL_Lab manual-1.pdf'
bfill      chess.cpp              dda         line          square.cpp
sakshi711@sakshi711:~/23231$ ls -b
bangle     bre_mouse.cpp          clip        dda_mouse.cpp  Polygon_filling.cpp
bchess     CGL-PR\ Statements\ For\ Reference.pdf clip.cpp    fill.cpp       SE_IT_CGL_Lab\ manual-1.pdf
bfill      chess.cpp              dda         line          square.cpp
bfill.cpp  circle                dda.cpp    linffill.cpp   test
bre_mouse  circle.cpp            dda_mouse  Polygon_filling test.cpp
sakshi711@sakshi711:~/23231$ ls -c
test       circle      'CGL-PR Statements For Reference.pdf'  linffill.cpp  bfill
test.cpp   circle.cpp  dda_mouse.cpp                        clip          bfill.cpp
square.cpp bre_mouse   dda                                  clip.cpp      Polygon_filling
fill.cpp   bre_mouse.cpp dda.cpp                             bchess        Polygon_filling.cpp
bangle     dda_mouse   line                                chess.cpp     'SE_IT_CGL_Lab manual-1.pdf'
sakshi711@sakshi711:~/23231$ ls -A
bangle     bre_mouse.cpp          clip        dda_mouse.cpp  Polygon_filling.cpp
bchess     'CGL-PR Statements For Reference.pdf' clip.cpp    fill.cpp       'SE_IT_CGL_Lab manual-1.pdf'
bfill      chess.cpp              dda         line          square.cpp
bfill.cpp  circle            dda.cpp    linffill.cpp   test
bre_mouse  circle.cpp          dda_mouse  Polygon_filling test.cpp
sakshi711@sakshi711:~/23231$ ls -B
bangle     bre_mouse.cpp          clip        dda_mouse.cpp  Polygon_filling.cpp
bchess     'CGL-PR Statements For Reference.pdf' clip.cpp    fill.cpp       'SE_IT_CGL_Lab manual-1.pdf'
bfill      chess.cpp              dda         line          square.cpp
bfill.cpp  circle            dda.cpp    linffill.cpp   test
bre_mouse  circle.cpp          dda_mouse  Polygon_filling test.cpp
```

2) Ps

allows you to view information about the processes running on your Linux system.

Syntax: *ps [options]*

```
sakshi711@sakshi711:~/23231$ ps -eM
```

3) echo

The echo command in Linux is a built-in command that allows users to display lines of text or strings that are passed as arguments.

Syntax: *echo [option] [string]*

```
sakshigangurde711@Sakshi:/mnt/d$ echo "Its PICT"
Its PICT
sakshigangurde711@Sakshi:/mnt/d$ echo -n
sakshigangurde711@Sakshi:/mnt/d$ echo -e
sakshigangurde711@Sakshi:/mnt/d$ echo -e "Hello"
Hello
sakshigangurde711@Sakshi:/mnt/d$ echo -E
sakshigangurde711@Sakshi:/mnt/d$ |
```

4) read

read command in Linux system is used to read from a file descriptor. Basically, this command read up the total number of bytes from the specified file descriptor into the buffer

Syntax: *read*

```
sakshigangurde711@Sakshi:/mnt/d$ read name
Sakshi
sakshigangurde711@Sakshi:/mnt/d$ echo name
name
sakshigangurde711@Sakshi:/mnt/d$ echo $name
Sakshi
```

5) touch

The touch command is a standard command used in the UNIX/Linux operating system which is used to create, change and modify the timestamps of a file.

Syntax: *touch [options] file_name*

```
sakshigangurde711@Sakshi:/mnt/e$ cd TE-IT
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ ls -l
total 11632
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711 3708882 Jul  2 08:15 'LP1_NBA Lab Manual_2
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711 2930953 Jul  2 08:14 Syllabus-teit.pdf
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711 3771348 Jul  2 08:15 'TE_IT_HCIL_Lab manua
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711 1494278 Jul  2 08:14 'TE_IT_OSL_Lab Manual
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ touch Syllabus-teit
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ ls -l
total 11632
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711 3708882 Jul  2 08:15 'LP1_NBA Lab Manual_2
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711      0 Jul  4 17:23 Syllabus-teit
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711 2930953 Jul  2 08:14 Syllabus-teit.pdf
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711 3771348 Jul  2 08:15 'TE_IT_HCIL_Lab manua
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711 1494278 Jul  2 08:14 'TE_IT_OSL_Lab Manual
```

6) cat

The cat command in Linux is more than just a simple tool; it's a versatile companion for various file-related operations, allowing users to view, concatenate, create, copy, merge, and manipulate file contents.

Syntax: *cat [OPTION] [FILE]*

```
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ cat demo.txt
cat: demo.txt: No such file or directory
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ cat >demo.txt
file
.
^C
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ cat demo.txt
file
.
```

7) grep

The grep command in Unix/Linux is a powerful tool used for searching and manipulating text patterns within files.

Syntax: *grep [options] pattern [files]*

```
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ grep linux demo.txt
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ gep -v Linux demo.txt
Command 'gep' not found, but there are 16 similar ones.
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ grep -v Linux demo.txt
file
.
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ grep Linux demo.txt
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ grep -c Linux demo.txt
0
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ grep -o Linux demo.txt
```

8) sed

SED command in UNIX stands for stream editor and it can perform lots of functions on file like searching, find and replace, insertion or deletion.

Syntax: *sed OPTIONS... [SCRIPT] [INPUTFILE...]*

```
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ cat demo.txt
I am from PICT
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ sed 's/PICT/Nashik.g' demo.txt
sed: -e expression #1, char 15: unterminated 's' command
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ sed 's/PICT/Nashik/g' demo.txt
I am from Nashik
sakshigangurde711@Sakshi:/mnt/e/TE-IT$
```

9) chmod

In Unix operating systems, the chmod command is used to change the access mode of a file. The name is an abbreviation of change mode.

Syntax: *chmod [options] [mode] [File_name]*

```
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ ls -ltr
total 11632
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711 2930953 Jul  2 08:14 Syllabus-teit.pdf
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711 1494278 Jul  2 08:14 'TE_IT_OSL_Lab Manual (1).pdf'
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711 3708882 Jul  2 08:15 'LP1_NBA Lab Manual_2022-23_ ML ,DAA -ADBMS.pdf'
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711 3771348 Jul  2 08:15 'TE_IT_HCIL_Lab manual_Updated.pdf'
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711      0 Jul  4 17:30 Syllabus-teit
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711     14 Jul  4 17:57 demo.txt.txt
-rwxrwxrwx 1 sakshigangurde711 sakshigangurde711     15 Jul  4 17:58 demo.txt
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ chmod go-w demo.txt
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ cat demo.txt
I am from PICT
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ chmod u+rwx demo.txt
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ cat demo.txt
I am from PICT
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ chmod u+rwx,go+r demo.txt
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ cat demo.txt
I am from PICT
```

10) fork

The Fork system call is used for creating a new process in Linux, and Unix systems, which is called the child process, which runs concurrently with the process that makes the fork() call (parent process).

Syntax: *fork()*

```
sakshigangurde711@Sakshi:/mnt/d/hugo$ gcc -o os os.c
sakshigangurde711@Sakshi:/mnt/d/hugo$ ./os
Hello from the parent process! PID: 72, Child PID: 73
Hello from the child process! PID: 73
```

```
#include <stdio.h>
#include <unistd.h>
int main()
{
    pid_t pid = fork();
    if (pid < 0)
    {
        // Fork failed
        fprintf(stderr, "Fork failed\n");
        return 1;
    }
    else if (pid == 0)
    {
        // Child process
        printf("Hello from the child process! PID: %d\n", getpid());
    }
    else
    {
        // Parent process
        printf("Hello from the parent process! PID: %d, Child PID: %d\n", getpid(), pid);
    }

    return 0;
}
```

11) pwd

The 'pwd,' which stands for "print working directory." In this article, we will delve into the 'pwd' command, exploring its functionality, usage, and various examples.

Syntax: *pwd [OPTIONS]*

```
sakshigangurde711@Sakshi:~$ pwd
/home/sakshigangurde711
sakshigangurde711@Sakshi:~$ cd /mnt/d
sakshigangurde711@Sakshi:/mnt/d$ pwd
/mnt/d
```

12) kill

kill command in Linux (located in /bin/kill), is a built-in command which is used to terminate processes manually. kill command sends a signal to a process that terminates the process.

Syntax: *kill [signal] PID*

```
sakshigangurde711@Sakshi:/mnt/e$ kill -l
1) SIGHUP      2) SIGINT      3) SIGQUIT      4) SIGILL      5) SIGTRAP
6) SIGABRT     7) SIGBUS      8) SIGFPE       9) SIGKILL     10) SIGUSR1
11) SIGSEGV    12) SIGUSR2    13) SIGPIPE     14) SIGALRM    15) SIGTERM
16) SIGSTKFLT  17) SIGCHLD   18) SIGCONT     19) SIGSTOP    20) SIGTSTP
21) SIGTTIN    22) SIGTTOU   23) SIGURG      24) SIGXCPU    25) SIGXFSZ
26) SIGVTALRM  27) SIGPROF   28) SIGWINCH    29) SIGIO       30) SIGPWR
31) SIGSYS     34) SIGRTMIN  35) SIGRTMIN+1  36) SIGRTMIN+2  37) SIGRTMIN+3
38) SIGRTMIN+4 39) SIGRTMIN+5 40) SIGRTMIN+6  41) SIGRTMIN+7  42) SIGRTMIN+8
43) SIGRTMIN+9 44) SIGRTMIN+10 45) SIGRTMIN+11 46) SIGRTMIN+12 47) SIGRTMIN+13
48) SIGRTMIN+14 49) SIGRTMIN+15 50) SIGRTMAX-14 51) SIGRTMAX-13 52) SIGRTMAX-12
53) SIGRTMAX-11 54) SIGRTMAX-10 55) SIGRTMAX-9  56) SIGRTMAX-8  57) SIGRTMAX-7
58) SIGRTMAX-6  59) SIGRTMAX-5 60) SIGRTMAX-4  61) SIGRTMAX-3  62) SIGRTMAX-2
63) SIGRTMAX-1  64) SIGRTMAX

sakshigangurde711@Sakshi:/mnt/e$ ps
PID TTY          TIME CMD
 149 pts/3      00:00:00 bash
 161 pts/3      00:00:00 ps
sakshigangurde711@Sakshi:/mnt/e$ kill 161
-bash: kill: (161) - No such process
```

13) ifconfig

Knowing your IP address is fundamental for network administration, troubleshooting, and various Linux system tasks. In this article, we will explore several methods to find your IP address in a Linux environment.

Syntax: *ifconfig [interface] [options]*

```
sakshigangurde711@Sakshi:/mnt/e$ ifconfig
eth0: flags=4163<UP,BROADCAST,RUNNING,MULTICAST> mtu 1500
    inet 172.26.38.205 netmask 255.255.240.0 broadcast 172.26.47.255
    inet6 fe80::215:5dff:fee2:31f2 prefixlen 64 scopeid 0x20<link>
    ether 00:15:5d:e2:31:f2 txqueuelen 1000 (Ethernet)
    RX packets 93 bytes 154360 (154.3 KB)
    RX errors 0 dropped 0 overruns 0 frame 0
    TX packets 80 bytes 6131 (6.1 KB)
    TX errors 0 dropped 0 overruns 0 carrier 0 collisions 0

lo: flags=73<UP,LOOPBACK,RUNNING> mtu 65536
    inet 127.0.0.1 netmask 255.0.0.0
    inet6 ::1 prefixlen 128 scopeid 0x10<host>
    loop txqueuelen 1000 (Local Loopback)
    RX packets 0 bytes 0 (0.0 B)
    RX errors 0 dropped 0 overruns 0 frame 0
    TX packets 0 bytes 0 (0.0 B)
    TX errors 0 dropped 0 overruns 0 carrier 0 collisions 0
```

14) locate

locate command in Linux is used to find the files by name. There are two most widely used file-searching utilities accessible to users called to find and locate.

Syntax: *locate [OPTION]... PATTERN...*

```
sakshi711@sakshi711:~$ locate demo.txt
/home/sakshi711/33229/demo.txt
sakshi711@sakshi711:~$ cd 33229
sakshi711@sakshi711:~/33229$ mkdir test.txt
sakshi711@sakshi711:~/33229$ cd ..
sakshi711@sakshi711:~$ locate test.txt
/usr/share/doc/xextproto/xtest.txt.gz
```

15) ping

Ensuring a stable and reliable internet connection is crucial for seamless navigation and efficient communication in the world of Linux.

Syntax: *ping [options] host_or_IP_address*

```
sakshigangurde711@Sakshi:/mnt/e$ ping www.google.com
PING www.google.com (216.58.196.68) 56(84) bytes of data.
64 bytes from kul01s09-in-f68.1e100.net (216.58.196.68): icmp_seq=2 ttl=117 time=13.1 ms

5 packets transmitted, 4 received, 20% packet loss, time 4026ms
rtt min/avg/max/mdev = 8.679/11.453/14.591/2.453 ms
```

16) sudo

Sudo (Super User DO) command in Linux is generally used as a prefix for some commands that only superusers are allowed to run.

Syntax: *sudo -V | -h | -l | -v | -k | -K | -s | [-H] [-P] [-S] [-b] |*

[-p prompt] [-c class] [-] [-a auth_type] [-r role] [-t type]

[-u username] [#uid] command

```
sakshigangurde711@Sakshi:/mnt/e$ sudo -l
[sudo] password for sakshigangurde711:

group] [-h host] [-p prompt] [-R directory] [-T timeout] [-u
user] file ...
```

17) df

Disk free also known as `df`, which is a powerful utility that provides valuable information on disk space utilization. The df command displays information about file system disk space usage on the mounted file system.

Syntax: *df [options] [filesystems]*

```
sakshigangurde711@Sakshi:/mnt/e/TE-IT$ df demo.txt
Filesystem      1K-blocks    Used Available Use% Mounted on
drvfs           11533308  786740   10746568   7% /mnt/e
sakshigangurde711@Sakshi:/mnt/e/TE-IT$
```
